

# Parachute Caddis

Rev 20150127

## **Materials Needed:**

**Hook:** TMC 100 or similar #10 - #16

**Thread:** 8/0, brown

**Body:** brown dry fly dubbing material

**Wing:** a bit of speckled turkey feather. V-shaped at its tip and covered with flexible cement

**Parachute Post:** White calf body hair

**Hackle:** rooster feather - parachute style

Tie the white calf parachute post and make several turns at its base so it is rigid and upright.

Shape the body with dubbing material.

Next to the white calf post, tie the turkey feather segment. This should be flat over the dubbing body.

Tie the rooster feather at the base of the white calf post.

Use some dubbing material to cover the tying of the turkey feather, and complete the body up to the hook eye.

Wrap the rooster feather in a parachute style at the base of the white calf hair post. Whip finish and cement.
